Letter of Reference

RE: Brian Borowy P. Eng. / Conduite Sauf Inc.

In early 2016, we were interested in removing a load bearing wall that separated the kitchen from the living area of our home, and replace it with a flush beam. After scouring the internet and meeting with contractors/engineers we retained Brian's professional services in March of this year. We have no regrets.

Brian is knowledgeable and professional which was key. During our search for an engineer we set up appointments to meet with and discuss the project. All except Brian were either late for the appointment, or tried to reschedule the meeting (in one case multiple times) or never showed up at all. Brian on the other hand was on time and delivered the product on time and on budget. In addition to his professionalism, Brian is a friendly individual and provides his clients with options and allows the client to have input into the design.

Wendy and I have no difficulty endorsing Brian for your project.

William & Wendy Donaldson
